

VI. Concepts Case Study

Notes:

Concepts Case Study

- Organize into small groups
- Conduct case study

Notes:

Completion of this case study requires an integrated team approach. Identifying numerical ARAR thresholds (e.g., MCLs) and their applicability is not the objective of this case study. Rather, teams should identify and be prepared to concisely present the conceptual justification they used to address the questions. In addressing these questions, participants will be required to draw on the information presented during this morning's session.
